## Abstracts

The report requires updating with new data and is sent in 48 hours after order is placed.

In this report, LP Information studies the present scenario (with the base year being 2017) and the growth prospects of global Cloud-RAN market for 2018-2023.

A radio access network (abbreviation: RAN) is a part of a mobile communication system. It is the realization of radio access technology. It exists between a device (for example, a mobile phone, a computer, or any remotely controlled machine) and a Core Network (CN), and provides a communication connection between the two.

First of all, Cloud-RAN offers various benefits like reduction in cost of network operations. The three types of cost reductions are energy consumption, site rental expenses and operational & maintenance cost of network. These savings can be balanced against cost incurred on fibre optical cables required to meet fronthaul capacity and latency requirements. Cloud-RAN also enhances capacity due to coordinated multipoint and ensures speedy performance. Aforementioned benefits of Cloud-RAN architecture automatically increase the value of service to end-users. Second, the global Cloud-RAN market can be divided into different regions. Emerging economies of Asia Pacific will generate significant demand in the following year.

Over the next five years, LPI(LP Information) projects that Cloud-RAN will register a xx% CAGR in terms of revenue, reach US\$ xx million by 2023, from US\$ xx million in 2017.
