The Cognitive Computing enables a machine to think, interpret and infer information like a human brain. The biggest advancement in this market is IBM's Watson Cognitive Computing. There are few players in the market that have developed the technique of integrating cognitive computing with internet of things (IoT).

The cognitive computing basically works on the principle of neocortex, a part of human brain that plays a big role in the decision making by analyzing the behaviors of a human being and makes decision on the basis of time series analysis. The computer systems that we are using today are consulting us the way we already programed them but cognitive computing systems are completely different, they works on the machine learning algorithms and natural language processing. This unique feature of cognitive computing is enabling business organizations to use immense amount of dark data available with them.

Over the next five years, LPI(LP Information) projects that Cognitive Computing will register a 31.0% CAGR in terms of revenue, reach US\$ 49800 million by 2023, from US\$ 9850 million in 2017.
