In this report, LP Information covers the present scenario (with the base year being 2017) and the growth prospects of global Coin-Operated Laundry Machines market for 2018-2023.

This research study involved the extensive usage of both primary and secondary data sources. The research process involved the study of various factors affecting the industry, including the government policy, market environment, competitive landscape, historical data, present trends in the market, technological innovation, upcoming technologies and the technical progress in related industry, and market risks, opportunities, market barriers and challenges. The following illustrative figure shows the market research methodology applied in this report.

Coin-Operated Laundry Machines require users to enter a requisite amount in coins to be able to use the machine for a specified time. Once the user has entered the amount the integrated timer in the machine sets up itself and does not require to be monitored. Since the Coin-Operated Laundry Machines required the user to pay the usage amount in advance, there is no need for a separate billing counter. This means hassles free payments, and that too without long queues. This also saves the laundromat extra space for more machines and drying area.

Since these machines maintain records of time automatically and directly collect money from the users, no separate billing and time recording staff is required. Few support staff are still a requisite to clean the laundry area and assist the users, but their number is far less than those required in general washing and drying machines.

Over the next five years, LPI(LP Information) projects that Coin-Operated Laundry Machines will register a 2.7% CAGR in terms of revenue, reach US\$ 2300 million by

2023, from US\$ 1960 million in 2017.
