Abstracts

The report requires updating with new data and is sent in 48 hours after order is placed.

In this report, LP Information covers the present scenario (with the base year being 2017) and the growth prospects of global Coke market for 2018-2023.

Coke is made by destructive distillation of a blend of selected Bituminous coals (called Coking coal or Metallurgical coal) in special high temperature ovens in the absence of oxygen until a greater part of the volatile matter is driven off.

The Coke industry is held by China, India and Japanese companies. China became the biggest producer and exporter of metallurgical coke many years ago. China has the world's largest steel output. As a result, China has become the world's largest consumer.

China has the world's largest coke production capacity, also the most manufacturers, industry concentration is very low. Because the downstream customers are relatively single, mostly for contract manufacturing.

However, as the global demand for metallurgical coke is declining, which indirectly results in the price of metallurgical coke dropping. Especially in 2015, it mainly affected by the declining downstream steel industry market. Manufacturers have long been in a negative profit position. However, with the 2017 steel market picking-up. The increase in downstream demand led to a rebound in market prices.

As the steel industry in China reshuffled, excess capacity was continuously removed. The overall operating rate has been improved. We estimate that Metallurgical Coke consumption will continue to increase at a rate of 1.71% in the following 6 years.

Over the next five years, LPI(LP Information) projects that Coke will register a xx% CAGR in terms of revenue, reach US\$ xx million by 2023, from US\$ xx million in 2017.
