## Abstracts

The report requires updating with new data and is sent in 48 hours after order is placed.

In this report, LP Information covers the present scenario (with the base year being 2017) and the growth prospects of global Colloidal Silica market for 2018-2023.

Colloidal silica is silica particles that are suspended in a liquid. The liquid is denser than water and has been stabilized electrostatically to allow the particles to stay suspended in the solution. The silica particles are also very small and do not have a large density. If the particles are too large, they will settle out of the solution. If the silica particles are too small, they are difficult to stabilize in a solution. Colloidal silica is not only available in bulk deliveries, but also in plastic drums and IBCs.

Colloidal silica is widely used in various industries: Investment Casting, Catalysts, Textiles & Fabrics, Refractories, Polishing, Paints & Coatings, Paper Industry and Others. Investment casting industry is the largest downstream application, which occupied about 43% market share of global colloidal silica consumption. Paints & Coatings and refractories are the second and third largest applications with 17% and 14% market share.

Over the next five years, LPI(LP Information) projects that Colloidal Silica will register a 5.1% CAGR in terms of revenue, reach US\$ 1180 million by 2023, from US\$ 880 million in 2017.
