Abstracts

The report requires updating with new data and is sent in 48 hours after order is placed.

In this report, LP Information covers the present scenario (with the base year being 2017) and the growth prospects of global Colloids (Blood Plasma) market for 2018-2023.

Colloids (blood plasma) are the substances of expanding the circulating blood volume, which mainly contain albumin type, gelatin type, dextran type and hydroxyethyl starch type.

Colloids (Blood Plasma) can be applied for extensive burns, massive blood or plasma loss and hypovolemic shock. In this report, we calculate colloids (blood plasma) preparations, which is produced by albumin, gelatin, dextran and hydroxyethyl starch. The global colloids (blood plasma) industry is mature. The production of Human Albumin increase from 544.08 MT in 2010 to 805.38 MT in 2015, with an average growth rate of more than 9.60 %. The production of synthetic colloids increase from 42.03 Million Units in 2010 to 53.43 Million Units in 2015, with an average growth rate of more than 5.42 %.

The production growth rate of hydroxyethyl starch colloid reduced obviously because Europe and USA banned the usage of HES solutions in patients with sepsis. At the same time, this stimulated the increase of growth rate in albumin colloids.

The manufacturers and consumers of natural colloids and synthetic colloids are both concentrated in North America, Europe and China. North America is the largest manufacturer and consumer in natural colloids, however Europe occupies the largest share in the global synthetic market.

Over the next five years, LPI(LP Information) projects that Colloids (Blood Plasma) will register a xx% CAGR in terms of revenue, reach US\$ xx million by 2023, from US\$ xx

million in 2017.
