The report requires updating with new data and is sent in 48 hours after order is placed.

In this report, LP Information covers the present scenario (with the base year being 2017) and the growth prospects of global Commercial Aircraft Autopilot System market for 2018-2023.

Autopilots are electronic systems designed to navigate a vehicle without human input. Although limitedly available in marine and automobile applications, they are most common in the aerospace industry, and that is what we will count in this report.

In the world of aircraft, the autopilot is more accurately described as the automatic flight control system (AFCS). An AFCS is part of an aircraft's avionics - the electronic systems, equipment and devices used to control key systems of the plane and its flight. Smaller aircraft rely on electronic gyroscopes to determine pitch, roll, and sometimes yaw, while in flight, but rely on hand control for landing, takeoff, and other essential functions. Commercial or military autopilots for larger aircraft have taxi, takeoff, cruise, descent, approach, and landing phases that are governed by computer software integrated into a flight management system.

Rockwell Collins, Honeywell and Genesys Aerosystems captured the top three revenue share spots in the Commercial Aircraft Autopilot System market in 2014. Rockwell Collins dominated with 23.08 percent revenue share, followed by Honeywell with 17.06 percent revenue share and Genesys Aerosystems with 10.91 percent revenue share.

Over the next five years, LPI(LP Information) projects that Commercial Aircraft Autopilot System will register a xx% CAGR in terms of revenue, reach US\$ xx million by 2023, from US\$ xx million in 2017.
