## Abstracts

The report requires updating with new data and is sent in 48 hours after order is placed.

In this report, LP Information covers the present scenario (with the base year being 2017) and the growth prospects of global Commodity Plastics market for 2018-2023.

Commodity plastics are plastics that are used in high volume and wide range of applications, such as film for packaging, photographic and magnetic tape, clothing, beverage and trash containers and a variety of household products where mechanical properties and service environments are not critical.

The commodity plastics market has been segmented on the basis of type into Polyethylene (PE), Polypropylene (PP), Polyvinyl Chloride (PVC), Polystyrene (PS), Poly(methyl methacrylate) (PMMA), and others. The PE segment accounted for the largest share of the commodity plastics market in 2016, in terms of volume. It is also expected to be the fastest-growing type segment of the commodity plastics market. This growth can be attributed to the high demand for PE commodity plastics in the packaging application owing to the increased demand for packaged food & beverages.

Over the next five years, LPI(LP Information) projects that Commodity Plastics will register a 6.9% CAGR in terms of revenue, reach US\$ 699900 million by 2023, from US\$ 469800 million in 2017.
