A commutator is the moving part of a rotary electrical switch in certain types of electric motors and electrical generators that periodically reverses the current direction between the rotor and the external circuit. It consists of a cylinder composed of multiple metal contact segments on the rotating armature of the machine. Two or more stationary electrical contacts called 'brushes' made of a soft conductor like carbon press against the commutator, making sliding contact with successive segments of the commutator as it rotates. The windings (coils of wire) on the armature are connected to the commutator segments.

In the coming years there is an increasing demand for Commutators in the regions of United States and Europe that is expected to drive the market for more advanced Commutators. Increasing of auto industry expenditures, more-intense competition, launches in introducing new products, increasing of spending on household appliances industry, retrofitting and renovation of old technology, increasing adoption of Commutator will drive growth in United States and Europe markets. However, China is still the biggest market in the world.

Globally, the Commutators industry market is low concentrated as the manufacturing technology of Commutators is relatively matures than some high-tech equipment. And some enterprises, like Kolektor, Huarui Electric, Kaizhong, etc. are well-known for the wonderful performance of their Commutators and related services. At the same time, China, occupied 53.90% production market share in 2016, is remarkable in the global Commutators industry because of their market share and technology status of Commutators.
