In this report, LP Information covers the present scenario (with the base year being 2017) and the growth prospects of global Composite Bearings market for 2018-2023.

The composite bearings, by product type, is further segmented into metal matrix and fiber matrix. The metal matrix based composite bearings comprise a major market share owing to their high strength, operational stability in harsh environments and moderate cost. Due to these properties, metal matrix based composite bearings are used in applications including construction & mining, agriculture and automotive, and others. The major applications in the composite bearings market include construction & mining, automotive, agriculture, aerospace, marine, and others. The agriculture application is the fastest growing application in the composite bearings market. Composite bearings offer various features including being light in weight, dimensional stability and resistance against corrosion, and operational stability at high temperatures in comparison to traditional materials such as single metal bearings, due to which, the usage of composite bearings in the marine, construction & mining and aerospace industries is growing at a high rate.

Over the next five years, LPI(LP Information) projects that Composite Bearings will register a 7.9% CAGR in terms of revenue, reach US\$ 7960 million by 2023, from US\$ 5050 million in 2017.
