In this report, LP Information covers the present scenario (with the base year being 2017) and the growth prospects of global Composite Insulators market for 2018-2023. Composite Insulators are special insulation controls, which include “core” and “housing”. The core is usually made of resin-impregnated glass fibers. The housing can be manufactured from a variety of materials including elastomers, resins, or fluorocarbons. Compared with ceramic insulators and glass insulators, composite insulators are less costly, lighter in weight, and have excellent hydrophobic capability. The Composite Insulators industry concentration is scattered; there are about 29 mainly manufacturers in the world, and the products mainly from China and Europe. This industry is affected by the economy and policy, so it's important to focus on economic indexes and leaders' prefer. In recent years, more and more people pay attention to rising environment standards, especially in underdeveloped regions that have a large population and fast economic growth, the need of Composite Insulators will increase.

Over the next five years, LPI(LP Information) projects that Composite Insulators will register a 10.3% CAGR in terms of revenue, reach US\$ 3690 million by 2023, from US\$ 2050 million in 2017.
