The traditional role of compounding pharmacies is to make drugs prescribed by doctors for specific patients with needs that can't be met by commercially available drugs. For example:

A young child may need a small, liquid dose of a drug made only in adult-dosage tablets.

A person may be allergic to one of the ingredients in the commercial version of a drug. A compounding pharmacy would make the proper dosage and form of the drug without any offending ingredients.

Compounded medications are made based on a practitioner's prescription in which individual ingredients are mixed together in the exact strength and dosage form required by the patient.
