## Abstracts

The report requires updating with new data and is sent in 48 hours after order is placed.

In this report, LP Information covers the present scenario (with the base year being 2017) and the growth prospects of global Concentrated Photovoltaic (CPV) market for 2018-2023.

Concentrated Photovoltaic (CPV) is a photovoltaic technology that generates electricity from sunlight. Contrary to conventional photovoltaic systems, it uses lenses and curved mirrors to focus sunlight onto small, but highly efficient, multi-junction (MJ) solar cells. In addition, CPV systems often use solar trackers and sometimes a cooling system to further increase their efficiency. Ongoing research and development is rapidly improving their competitiveness in the utility-scale segment and in areas of high insolation. This sort of solar technology can be thus used in smaller areas.

Owing to the cost of solar cells steadily are declining, Concentrated Photovoltaic (CPV) is facing great crisis. Because the industry is still in the leading stage of technology, a project need to raise a lot of money, what is more, industry gross margin is smaller. So, after 2013, there are large enterprises choose to close, exit, transfer business from Concentrated Photovoltaic (CPV). However, these players still keeps a very positive wait-and-see attitude towards Concentrated Photovoltaic (CPV).

By comparing the IHS statistics CPV installation data, as well as interviews with the industry experts, we think that there will be a phase of outbreak of growth in Central America, Africa, India, Southeast Asia, etc. in the next few years.

Over the next five years, LPI(LP Information) projects that Concentrated Photovoltaic (CPV) will register a 7.3% CAGR in terms of revenue, reach US\$ 970 million by 2023, from US\$ 640 million in 2017.
