In this report, LP Information covers the present scenario (with the base year being 2017) and the growth prospects of global Concrete Vibrator market for 2018-2023.

Concrete vibrator, also known as concrete vibrating machine, acts through vibration driven by some power removing honeycomb phenomena to exclude internal pores which due to its own gravity of the concrete. This makes the concrete to compact. Global recession has impacted the concrete vibrator industry, particularly in Europe and North America. However, the concrete vibrator market is experiencing enormous growth. The China, EU and USA regions are the major consumer in the market and have accounted for about 79% market share with respect to volume in 2014. Though in some areas the growth rate will be some volatility, the total market is further expected to show growth in the future, mainly due to the growth potential of the real estate market in China and India.

Concrete vibrators are mainly used in industry, such as dam construction, mine and well construction, bridges construction etc. Other applications include housing construction and other concrete engineering. Growing demand from mining industry and increasing number of upcoming highway construction projects are some of the factors anticipated to drive the concrete vibrators market growth over the forecast period.

Over the next five years, LPI(LP Information) projects that Concrete Vibrator will register a -0.6% CAGR in terms of revenue, reach US\$ 340 million by 2023, from US\$ 350 million in 2017.
