Abstracts

The report requires updating with new data and is sent in 48 hours after order is placed.

In this report, LP Information covers the present scenario (with the base year being 2017) and the growth prospects of global Connected Vending Machines market for 2018-2023.

Connected vending machine is a machine that dispenses items such as snacks, beverages, alcohol, cigarettes, lottery tickets to customers automatically, after the customer inserts currency or credit into the machine. The first modern vending machines were developed in England in the early 20th century and dispensed postcards.

Connected vending machine is the contactless payment-enabled vending machines that support both online payment and site payment. It can also calculate the amount of the sold products and send messages automatically when the products are going to be sold out.

The first solutions for including connectivity in vending machines became commercially available already two decades ago. It has still taken years for the technology to gain the interest of mainstream vending operators. The market has nevertheless gained momentum in recent years as more and more vending operators have started to deploy cashless payment systems and vending telemetry solutions at a larger scale. Demand for cashless payments is currently the main market driver. However, vending telemetry is forecasted to have a more transformational effect on the industry in the future as these solutions enable vending operators to substantially improve their operational efficiency. The global installed base of connected vending machines grew by 16.22 percent to over 140 thousand units in 2014.

The vending machine industry is undergoing a digital transformation as it seeks to embrace the growing trend toward Internet-connected devices to attract and engage

more customers. Adding 'intelligence' to vending machines provides a more personal, interactive and fun experience for consumers while allowing brands and operators to use cloud services and data analytics, leading to reduced operating costs and the establishment of new innovative business models within the vending sector.

Over the next five years, LPI(LP Information) projects that Connected Vending Machines will register a xx% CAGR in terms of revenue, reach US\$ xx million by 2023, from US\$ xx million in 2017.
