In this report, LP Information covers the present scenario (with the base year being 2017) and the growth prospects of global Constant Velocity Universal Joint market for 2018-2023.

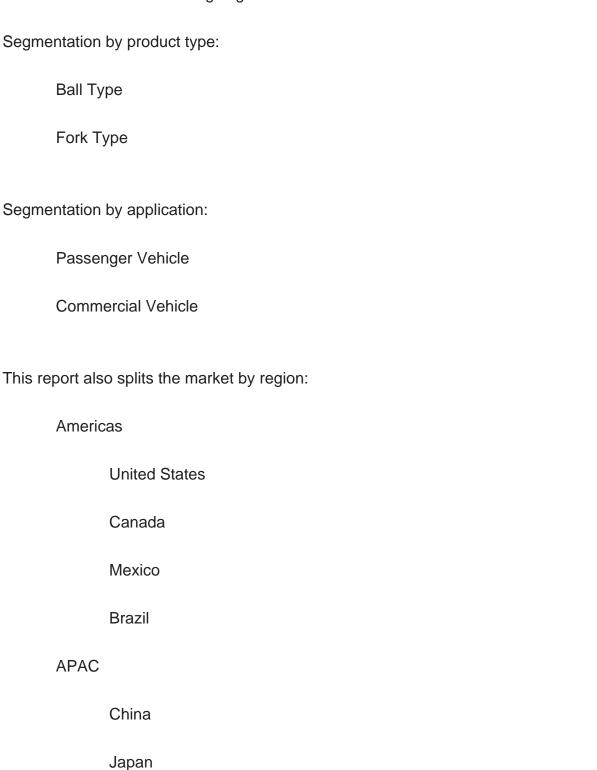

Constant-velocity joints (CV joints) allow a drive shaft to transmit power through a variable angle, at constant rotational speed, without an appreciable increase in friction or play. They are mainly used in front wheel drive vehicles, and many modern rear wheel drive cars with independent rear suspension typically use CV joints at the ends of the rear axle halfshafts and increasingly use them on the propshafts (drive shafts). In the next years, the growth rate of automotive production may decrease in Europe and US, but the enormous automotive population will provide large market demand. In China, the growth rate of automotive production will still be higher than other regions. The situation of automotive constant velocity universal joint industry will be the same. There is large technical gap between automotive constant velocity universal joints produced by manufacturers from China and abroad. To maintain market share, these domestic manufacturers must invest more on research and development. In China, the distribution of automotive manufacturers is relatively concentrated, which means the downstream market is concentrated. To get rid of the limit and reduce the risk, automotive constant velocity universal joint manufacturers should seek more automotive manufacturers as cooperative partners.

Over the next five years, LPI(LP Information) projects that Constant Velocity Universal Joint will register a 1.0% CAGR in terms of revenue, reach US\$ 7870 million by 2023, from US\$ 7410 million in 2017.
