In this report, LP Information covers the present scenario (with the base year being 2017) and the growth prospects of global Construction Adhesive market for 2018-2023.

An adhesive is any substance applied to the surfaces of materials that binds them together and resists separation. Construction Adhesives are used to bond or repair two items in the home & construction site, replacing traditional adhesives such as contact cements and wood glues, and traditional physical fixings such as nails and screws. Construction Adhesives are available in drywall, subfloor, roofing resilient flooring, other.

Adhesives are formulated by compounding (mixing) the base material with fillers, pigments, stabilizers, plasticizers and other additives. Low- to medium-performance products are based on natural substances such as natural rubber or protein or synthetic polymers such as polyvinyl acetate, polyvinyl alcohol, polyesters, acrylics, neoprene, butyl rubber, phenolic. High-performance products are based on polymers such as epoxy, polysulfide, polyurethane, cyanoacrylate and silicone which have enhanced properties including bond strength, elongation capacity, durability or environmental resistance.

Epoxy adhesives emerged as the leading product segment in the overall market for construction adhesives and accounted for 30.62% of total market volume in 2015.

Acrylic adhesives followed epoxy adhesives which accounted for 27.52% of total market volume in 2015.

Growth of the construction adhesive market is largely associated with the growth in the construction industry. The construction industry is expected to push the adhesive industry to new heights, which in turn will help the construction market achieve greater
