## Abstracts

The report requires updating with new data and is sent in 48 hours after order is placed.

In this report, LP Information covers the present scenario (with the base year being 2017) and the growth prospects of global Copper Heat Sink market for 2018-2023.

Copper heat sink is necessary due to the greater level of thermal conductivity one can achieve with it. In fact, copper conducts two times the amount of thermal energy as aluminum, making it an extremely desirable substance for heatsink production. Copper is able to be refined as a heatsink, put through die-casting and even bound together in the form of plates. There are two heat sink types: active and passive. Active Heat Sinks are those that have some kind of air mover on them. This might be a fan or blower, and generally it is attached in some way to the heat sink. The air move provides local air helping to cool down a semiconductors hot spot. Many active heat sinks are often seen cooling high end graphics processors (GPUs) on graphics boards. The performance of this kind of heat sink is high.

China lead the global market for Copper Heat Sink during the forecast period, due to the rapid growth of the demand market in China. This region accounts for a market share of nearly 43.9 % in 2017 and is followed by the North America and Europe.

Of the major players of the Copper Heat Sink market, Delta maintained its first place in the ranking in 2017. Delta accounted for 6.008% of the Global Copper Heat Sink revenue market share in 2017.
