In this report, LP Information covers the present scenario (with the base year being 2017) and the growth prospects of global Cored Wire market for 2018-2023.

Cored wire electrodes, also simply called cored wire, are small tubes filled with metallic or mineral powders, used for steelmaking and casting applications. They are manufactured as wire with the proper diameters in molding or drawing lines. They have higher deposition efficiency than solid wire, which in turn speeds welding tasks. The core of metal-cored wire contributes almost entirely to the deposited weld metal.

This report is focused on metallurgical cored wire type. According to the different metal types of core layers, cored wire can be divided into pure calcium, silicon-calcium, pure aluminum, tombarthite and many other kinds. Each kind of alloy cored wire can be divided into different products as well, such as Ca28Si55 and Ca31Si65 and so on. With the rapid development of wire feeding technology in various fields, the demand for a variety of alloy cored wire increasing manufacturing forming speed, high degree of automation, automatic dosing machine is the next cored wire production technology Direction of development. In addition, the development of new, efficient and environmentally friendly powder cored wire line technology is also an important part of growing feed.

The application fields for cored wire can be broadly segmented into Steelmaking and Iron Casting industries, with specific product types used. Ca-Si cored wire is the most commonly used type now, but nodularization cored wires and inoculation cored wires are seeing a rapid growth trend in the next decade, more and more manufacturers are turning into these fields.

Over the next five years, LPI(LP Information) projects that Cored Wire will register a 1.4% CAGR in terms of revenue, reach US\$ 350 million by 2023, from US\$ 330 million in 2017.
