Abstracts

In this report, LP Information covers the present scenario (with the base year being 2017) and the growth prospects of global Corn Oil market for 2018-2023.

Corn oil (maize oil) is oil extracted from the germ of corn (maize). Its main use is in cooking, where its high smoke point makes refined corn oil a valuable frying oil. It is also a key ingredient in some margarines. Usually, corn oil is produced as a co-product of corn starch. Consequently, corn oil is generally less expensive than most other types of vegetable oils.

Regionally, the production areas of corn oil are mostly corn production areas. The global major corn production zones: USA, China, Brazil, and EU, are also the major production areas of corn oil. USA is the biggest production base of corn and corn oil, followed by China and EU. Large amount of corn oil is produced as co-product of corn starch and ethanol. Also, large amount of corn oil is exported from USA to the Middle East, where is one of the major corn oil consumption regions. Leading players in USA is ACH, the brand of which Mazola, also takes a leading share in Middle East market.

The major raw material of corn oil is corn germ, which is extracted from corn grain. The price of corn oil fluctuates with the market demand instead of corn germ price. As the capacity of corn oil grows rapidly in recent years, the price of corn oil has also been trending down generally, except a little lift in 2015. It is estimated that the price of corn oil would still going down slightly in the coming years.

Over the next five years, LPI(LP Information) projects that Corn Oil will register a 0.9% CAGR in terms of revenue, reach US\$ 7180 million by 2023, from US\$ 6820 million in

2017.
