The report requires updating with new data and is sent in 48 hours after order is placed.

In this report, LP Information covers the present scenario (with the base year being 2017) and the growth prospects of global Couplings market for 2018-2023.

Coupling is a device used to connect two shafts together at their ends for the purpose of transmitting power. Couplings do not normally allow disconnection of shafts during operation, however there are torque limiting couplings which can slip or disconnect when some torque limit is exceeded.

The Coupling is Very fragmented, the production of top sixteen manufacturers only account about 10% of global production. The high-end products mainly come from Europe and North America.

In the world wide, the plants of major manufactures mainly distribute in North America and China. The transnational companies, like Siemens and SKF, are the leading manufactures in the World.

The import and export business of this industry is not very frequent. The main reason lies in that the coupling manufactures build factories in the main consumption countries.

Over the next five years, LPI(LP Information) projects that Couplings will register a 0.5% CAGR in terms of revenue, reach US\$ 25500 million by 2023, from US\$ 24800 million in 2017.

This report presents a comprehensive overview, market shares, and growth opportunities of Couplings market by product type, application, key manufacturers and key regions.
