The report requires updating with new data and is sent in 48 hours after order is placed.

In this report, LP Information covers the present scenario (with the base year being 2017) and the growth prospects of global CRISPR And CRISPR-Associated (Cas) Genes market for 2018-2023.

Clustered regularly interspaced short palindromic repeats (CRISPR) are segments of prokaryotic DNA containing short repetitions of base sequences. Each repetition is followed by short segments of 'spacer DNA' from previous exposures to a bacteriophage virus or plasmid.

The CRISPR/Cas system is a prokaryotic immune system that confers resistance to foreign genetic elements such as those present within plasmids and phages, and provides a form of acquired immunity. CRISPR associated proteins (Cas) use the CRISPR spacers to recognize and cut these exogenous genetic elements in a manner analogous to RNA interference in eukaryotic organisms. CRISPRs are found in approximately 40% of sequenced bacterial genomes and 90% of sequenced archaea. CRISPR And CRISPR-Associated (Cas) Genes industry is relatively concentrated, manufacturers are mostly in the Europe and North America. Among them, North America region accounted for more than 45.70% of the total market of global CRISPR And CRISPR-Associated (Cas) Genes.

Although this market has great potential for future development, we do not recommend entering the market for investors who do not have strong capital or do not have key technology.

Over the next five years, LPI(LP Information) projects that CRISPR And CRISPR-Associated (Cas) Genes will register a 39.8% CAGR in terms of revenue, reach US\$ 2640 million by 2023, from US\$ 350 million in 2017.
