The report requires updating with new data and is sent in 48 hours after order is placed.

In this report, LP Information covers the present scenario (with the base year being 2017) and the growth prospects of global Croissant Forming Machine market for 2018-2023.

Croissant Forming Machine is Machine used for forming Croissant. A croissant is a buttery, flaky, viennoiserie pastry named for its crescent shape. Croissants and other viennoiserie are made of a layered yeast-leavened dough. The dough is layered with butter, rolled and folded several times in succession, then rolled into a sheet, in a technique called laminating. The process results in a layered, flaky texture, similar to a puff pastry. In the report, we focused on the automated croissant forming machine and croissant forming line.

In the coming years there is an increasing demand for croissant forming machine in the regions of North America and Europe that is expected to drive the market for more advanced croissant forming machine. Increasing of food fields expenditures, more-intense competition, launches in introducing new products, increasing of spending on life quality, retrofitting and renovation of old technology, increasing adoption of croissant forming machine in Asia-Pacific and South America will drive growth in global markets. Globally, the croissant forming machine industry market is concentrated as the manufacturing technology of croissant forming machine is relatively matures than some high-tech equipment. And some enterprises, like Fritsch, Rademaker, Rondo and Rheon, etc. are well-known for the wonderful performance of their croissant forming machine and related services. At the same time, Europe, occupied 45.48% production market share in 2017, is remarkable in the global croissant forming machine industry because of their market share and technology status of croissant forming machine.

The consumption volume of croissant forming machine is related to downstream industries and global economy. As there will always be some uncertain in the global economy in the following years, the growth rate of croissant forming machine industry may not keep that fast. But it is surely forecasted that the market of croissant forming machine is still promising.

The impact on the cost and availability of raw materials and certain components is uncertain due to potential supply changes. The costs of raw materials have a significant impact on the level of expenses. If the prices of raw materials and related factors such as energy prices increase, and if new companies cannot pass those price increases on to customers, their results of operations and financial condition would suffer.

For forecast, the global croissant forming machine revenue would keep increasing with annual growth rate with 4~6%. We tend to believe that this industry still has a bright future, considering the current demand of croissant forming machine. As for product prices, the slow downward trend in recent years will continue in the next few years, as competition intensifies. Similarly, there will be fluctuations in gross margin.

Over the next five years, LPI(LP Information) projects that Croissant Forming Machine will register a 4.5% CAGR in terms of revenue, reach US\$ 160 million by 2023, from US\$ 120 million in 2017.
