The report requires updating with new data and is sent in 48 hours after order is placed.

In this report, LP Information covers the present scenario (with the base year being 2017) and the growth prospects of global CVD Diamond market for 2018-2023.

This report studies the CVD Diamond market, CVD is an acronym for chemical vapor deposition. This means that a material is deposited from a gas onto a substrate and that chemical reactions are involved. CVD Diamond is a synthetic diamond prepared by CVD techniques. Generally, low pressure of CVD diamond is applied.

Based on type, the global CVD diamond market has been segmented into polished and rough types. Rough CVD diamond segment contributed for the largest share in the market, Polished CVD diamond segment contributed for the market share is about 47%, by both revenue and volume, owing to increasing applications as gemstone in jewelry industry. A polished high quality CVD diamond costs 30% to 40% less than the mined diamond.

Stone CVD diamonds are preferred by both gemological and industrial customers owing to their hardness, compatibility with cutting process and larger surface area. CVD diamonds are grown in lab and they are completely free of conflict. Such factors aided the segment to be the largest segment of the CVD diamond market in 2017.

Over the next five years, LPI(LP Information) projects that CVD Diamond will register a 9.4% CAGR in terms of revenue, reach US\$ 170 million by 2023, from US\$ 100 million in 2017.

This report presents a comprehensive overview, market shares, and growth opportunities of CVD Diamond market by product type, application, key manufacturers and key regions.
