Abstracts

The report requires updating with new data and is sent in 48 hours after order is placed.

In this report, LP Information covers the present scenario (with the base year being 2017) and the growth prospects of global Cyclopentane market for 2018-2023.

Cyclopentane is a highly flammable alicyclic hydrocarbon with chemical formula C_5H_{10} , consisting of a ring of five carbon atoms each bonded with two hydrogen atoms above and below the plane. It occurs as a colorless liquid with a petrol-like odor. Its melting point is $-94\text{ }^{\circ}C$ and its boiling point is $49\text{ }^{\circ}C$.

Cyclopentane is a highly flammable alicyclic hydrocarbon which is principally used as a blowing agent in foam manufacture, forming an excellent substitute for CFCs. It is recognised by environmental groups as having zero ozone depletion potential, making it a better alternative to HCFC 141-b. High stability of cyclopentane blown foams also yields performance benefits over CFC 11 foams, even where these are still permitted to be used. The increased consumption of cyclopentane is expected to continue during the remaining years of the forecast period of 2017-2023.

We tend to believe that this industry still has a bright future, considering the current demand of foam agents. The product price will keep a stable trend in the next five years. Similarly, there will be fluctuations in gross margin.

Over the next five years, LPI(LP Information) projects that Cyclopentane will register a xx% CAGR in terms of revenue, reach US\$ xx million by 2023, from US\$ xx million in 2017.
