## Abstracts

The report requires updating with new data and is sent in 48 hours after order is placed.

In this report, LP Information covers the present scenario (with the base year being 2017) and the growth prospects of global D-Xylose market for 2018-2023.

D-xylose (wood sugar – 5 carbon monosaccharide) is a white powder with a sweet taste. It is obtained from plants rich in hemicelluloses, such as sawdust, rice straw and corn cobs. It can be dissolved in hot ethanol and pyridine easily. Its sweetness is 40% of sucrose. The empirical formula is  $C_5H_{10}O_5$  and the molecular weight is 150.13. D-xylose can be classified into two types: raw material grade D-xylose and refine grade D-xylose. Raw material grade D-xylose is widely used in xylitol industry and glycoside industry. Refine grade D-xylose is widely used in food and beverage industry, flavor and fragrance industry, pet food industry and other industries. With the development of economy, these industries will need more D-xylose. So, D-xylose has a huge market potential in the future.

We tend to believe this industry is an emerging industry, and the consumption increasing degree will show a rapid growth curve. For product prices, the slow downward trend in recent years will maintain in the future as competition intensifies. Besides, prices gap between different brands will go narrowing gradually. Also, there will be fluctuation in gross margin.

Over the next five years, LPI(LP Information) projects that D-Xylose will register a 1.4% CAGR in terms of revenue, reach US\$ 270 million by 2023, from US\$ 250 million in 2017.
