Dental Silica is obtained from sodium silicate solution by destabilizing with acid in such a way as to yield very fine particles. The sum of the Assay value and the Sodium Sulfate content is not less than 98.0 percent.

In consumption market, the growth rate of global consumption is smooth relatively. USA, Europe and China are still the mainly consumption regions due to the advanced production technology and rapid development of economy. The global consumption value of paper mass silica increase with the 3.34% CAGR 2011-2016. Europe, China and North America are the still the mainly consumption regions due to the bigger demand of downstream applications. In 2015, these three regions occupied about 78% of the global consumption volume in total.

By aiming at different types of toothpaste, two major kinds of dental silica are made: dental abrasive silica and dental thickener silica. Paper mass silica has mainly three types, which include precipitated silica, fumed silica and colloidal silica etc. Precipitated silica is the mainly types in the market with production market share 51.32% in 2015. With the development of economy, these industries will need more dental silica and paper mass silica. So, dental silica and paper mass silica has a huge market potential in the future.

The major raw material for dental silica and paper mass silica is sulfuric acid, calcined soda and sodium silicate etc. On the global market, supply of raw materials is full. Fluctuations in the price of the upstream product will impact on the production cost of

dental silica and paper mass silica industry.

Over the next five years, LPI(LP Information) projects that Dental Silica and Paper Mass Silica will register a xx% CAGR in terms of revenue, reach US\$ xx million by 2023, from US\$ xx million in 2017.
