## Abstracts

The report requires updating with new data and is sent in 48 hours after order is placed.

In this report, LP Information covers the present scenario (with the base year being 2017) and the growth prospects of global Di-Isononyl Phthalate (DINP) market for 2018-2023.

This report studies the di-isononyl phthalate (DINP) market. Diisononyl phthalate (DINP) is a phthalate ester primarily used as a general purpose plasticizer. Plasticizers increase the softness and flexibility of polymeric materials. Over 95% of the DINP produced is used to improve the flexibility, pliability and elasticity of a variety of polyvinyl chloride (PVC) products.

Di-Isononyl Phthalate (DINP) is a major substitute for Di (2-ethylhexyl) phthalate (DOP) in most flexible PVC applications. Price difference between those two products is little. DINP is mainly used as plasticizer for PVC industry. In 2017, PVC plasticizer consumed about 1382 MT DINP.

Global major production regions are China, North America and Europe. Europe is the largest production region, as also the largest consumption region. In 2017, Europe produced 515 K MT and consumed 542 K MT.

In China, there were many suppliers. While limited by raw material resource, most company had stopped production. As manufacturing unit of DOP and DINP can be sharing, most DOP manufacturers can also produce DINP when customer need.

Over the next five years, LPI(LP Information) projects that Di-Isononyl Phthalate (DINP) will register a 3.7% CAGR in terms of revenue, reach US\$ 2570 million by 2023, from US\$ 2070 million in 2017.

This report presents a comprehensive overview, market shares, and growth
