In this report, LP Information covers the present scenario (with the base year being 2017) and the growth prospects of global Diamond Wire market for 2018-2023.

Diamond wire cutting (DWC) is the process of using wire of various diameters and lengths, impregnated with diamond dust of various sizes to cut through materials. Because of the hardness of diamonds, this cutting technique can cut through almost any material that is softer than the diamond abrasive.

A "diamond wire" is a tool used to thinly slice rectangular silicon ingots that are pre-cut to the dimensions of each wafer. It is a threadlike slicing tool made with a thin piano wire with diamond granules firmly attached and is thinner than a human hair.

Under the background of slower economy growth rate, companies face high risks of profit decline. Currently, China's electroplated diamond wire industry maintains a rapid growth, and electroplated diamond wire market in Europe, USA and Japan has a certain potential. The demand in these areas is relatively stable.

In future, the electroplated diamond wire industry in the world will turn concentrated. The world electroplated diamond wire consuming market will still has a certain amount of growth. Global competition is likely to turn to the relationship of competition and cooperation. With the development of economy, electroplated diamond wire has huge market potential in the future. Owing to the increasing of demand in electroplated diamond wire downstream products, the world electroplated diamond wire capacity will continue to expand.

Over the next five years, LPI(LP Information) projects that Diamond Wire will register a 41.2% CAGR in terms of revenue, reach US\$ 5160 million by 2023, from US\$ 650 million in 2017.
