In this report, LP Information covers the present scenario (with the base year being 2017) and the growth prospects of global Dichloromethane market for 2018-2023. Dichloromethane (DCM, or Methylene Chloride) is an organic compound with the formula CH_2Cl_2 . This colorless, volatile liquid with a moderately sweet aroma is widely used as a solvent. Although it is not miscible with water, it is miscible with many organic solvents. One of the most well-known applications of dichloromethane is in the drinking bird heat engine.

Europe, the United States, Japan and China are the world's major producer and consumer countries. 2012 after slow growth in Europe and the United States produce large Chinese growth. China will become the largest producer of dichloromethane and consumer countries in the future.

Currently, the Europe, the United States and Japan have issued a series of more stringent environmental regulation, strictly control the emissions, as the recovery is expected to gradually reduce the demand for dichloromethane.

The main raw materials of dichloromethane are methanol and liquid chlorine. These raw materials, as well as energy, labor and other costs have an impact on the price of dichloromethane product.

Over the next five years, LPI(LP Information) projects that Dichloromethane will register a xx% CAGR in terms of revenue, reach US\$ xx million by 2023, from US\$ xx million in 2017.
