Abstracts

The report requires updating with new data and is sent in 48 hours after order is placed.

In this report, LP Information covers the present scenario (with the base year being 2017) and the growth prospects of global Die Casting Machine market for 2018-2023.

Die casting is a manufacturing process for producing accurately dimensioned, sharply defined, smooth or textured-surface metal parts. It is accomplished by forcing molten metal under high pressure into reusable metal dies. The process is often described as the shortest distance between raw material and finished product.

For industry structure analysis, the Die Casting Machine industry is not that concentrated. The top five producers account for about 48.89% of the revenue market. Regionally, China is the biggest consumption area of Die Casting Machine.

China occupied 41.28% of the consumption market in 2016. It is followed by Europe, which respectively have around 15.05% of the global total industry.

For price trend analysis, a key variable in the performance of Die Casting Machine producers is raw material costs, specifically the speed at which any increase can be passed through to customers. The price of the major raw material varies according to the steel price. This year, as the downturn of global steel industry, the Die Casting Machine price would keep decreasing for at least the following 5 years.

For forecast, the global Die Casting Machine revenue would keep increasing with annual growth rate with 6~7%, and a little higher speed in China. We tend to believe that this industry still has a bright future, considering the current demand of Die Casting Machine. As for product prices, the slow downward trend in recent years will continue in the next few years, as competition intensifies. Similarly, there will be fluctuations in gross margin.

Over the next five years, LPI(LP Information) projects that Die Casting Machine will

register a 6.8% CAGR in terms of revenue, reach US\$ 2840 million by 2023, from US\$ 1910 million in 2017.
