Abstracts

The report requires updating with new data and is sent in 48 hours after order is placed.

In this report, LP Information covers the present scenario (with the base year being 2017) and the growth prospects of global Dielectric Elastomers market for 2018-2023.

Dielectric elastomers are made of a highly stretchable elastomeric film (mostly Silicone Rubber Elastomer, Acrylate Elastomer or Polyurethane Elastomer) as a dielectric, which is coated on both sides with highly flexible electrodes of graphite or carbon black.

According to the different materials, the dielectric elastomer can be divided into silicone rubber elastomer, acrylate elastomer, polyurethane elastomer and others.

As of 2015, the research topic of this material is mainly concentrated in the acrylate and silicone rubber composite materials, but the acrylic modulus changes greatly with temperature, and has the viscoelastic strain response is slow, therefore, more application prospect of silicon rubber composite.

Over the next five years, LPI(LP Information) projects that Dielectric Elastomers will register a xx% CAGR in terms of revenue, reach US\$ xx million by 2023, from US\$ xx million in 2017.
