The report requires updating with new data and is sent in 48 hours after order is placed.

In this report, LP Information covers the present scenario (with the base year being 2017) and the growth prospects of global Diesel Particulate Filter (DPF) market for 2018-2023.

Diesel particulate filters (DPF) are devices that physically capture diesel particulates to prevent their release to the atmosphere. Diesel particulate filter materials have been developed that show impressive filtration efficiencies, in excess of 90%, as well as good mechanical and thermal durability. Diesel particulate filters have become the most effective technology for the control of diesel particulate emissions—including particle mass and numbers—with high efficiencies.

Due to the particle deposition mechanisms in these devices, filters are most effective in controlling the solid fraction of diesel particulates, including elemental carbon (soot) and the related black smoke emission. Filters may have limited effectiveness, or be totally ineffective, in controlling non-solid fractions of PM emissions—SOF and sulfate particulates. To control total PM emissions, DPF systems are likely to incorporate additional functional components targeting the SOF—typically oxidation catalysts—while ultra-low sulfur fuels may be required to control sulfate particulates.

Diesel particulate filter is most widely used in automobile field e.g. light- and heavy-duty road going diesel- powered vehicles and for off-road diesel engines.

With premium pricing, businesses set costs higher than their competitors. Premium pricing is often most effective in the early days of a product's life cycle, and ideal for small businesses that sell unique goods.

Because customers need to perceive products as being worth the higher price tag, a

business must work hard to create a value perception. Along with creating a high-quality product, owners should ensure their marketing efforts, the product's packaging and the store's decor all combine to support the premium price. Penetration strategies aim to attract buyers by offering lower prices on goods and services. While many new companies use this technique to draw attention away from their competition, penetration pricing does tend to result in an initial loss of income for the business.

Over the next five years, LPI(LP Information) projects that Diesel Particulate Filter (DPF) will register a 3.3% CAGR in terms of revenue, reach US\$ 6320 million by 2023, from US\$ 5210 million in 2017.
