Abstracts

The report requires updating with new data and is sent in 48 hours after order is placed.

In this report, LP Information covers the present scenario (with the base year being 2017) and the growth prospects of global Differential Pressure Sensors market for 2018-2023.

Differential Pressure Sensors measure the difference between two pressures, one connected to each side of the sensor. Differential pressure sensors are used to measure many properties, such as pressure drops across oil filters or air filters, fluid levels (by comparing the pressure above and below the liquid) or flow rates (by measuring the change in pressure across a restriction). Technically speaking, most pressure sensors are really differential pressure sensors; for example a gauge pressure sensor is merely a differential pressure sensor in which one side is open to the ambient atmosphere.

The industry is relatively fragmented, the key brand include Honeywell, ABB, Amphenol, Panasonic, Siemens, Bosch, TE Connectivity, Emerson, Sensata, NXP, WIKA, Sensirion, First Sensor, Omron, Continental, Keller, Gems Sensors, OMEGA Engineering, Yokogawa Electric, AB Elektronik, Ashcroft, Lord Corporation, Setra Systems, KEYENCE, Hunan Firstrate Sensor and so on.

Differential pressure sensors provide the difference between two pressure sources through two ports, allowing customers to provide required pressure inputs to the device for measuring the readings. This flexibility offered by the device helps drive the growth of the differential pressure sensor market during the forecast period.

Over the next five years, LPI(LP Information) projects that Differential Pressure Sensors will register a 3.3% CAGR in terms of revenue, reach US\$ 1960 million by 2023, from US\$ 1610 million in 2017.
