The report requires updating with new data and is sent in 48 hours after order is placed.

In this report, LP Information covers the present scenario (with the base year being 2017) and the growth prospects of global Differential Thermal Analysis (DTA) market for 2018-2023.

The DTA Thermal Analyzer measures the temperature difference between a sample and an inert reference as a function of time or temperature. It consists of a sample holder comprising thermocouples, sample containers, a ceramic or metallic furnace, a temperature programmer; and a recording system. The instrument is used to characterize pharmaceuticals, food/biologicals, organic chemicals and inorganics. Transitions measured include glass transitions, crystallization, melting and sublimation. First, as for the global differential thermal analysis industry, the industry structure is relatively stable. The most of market share in revenue is grasped by the top five manufacturers, TA Instruments, PerkinElmer, Netzsch, Mettler-Toledo and Linseis, which closes to 70 per cent totally. The USA giant TA Instruments, which has 18.53% market share in 2015, is the leader in the differential thermal analysis industry. The manufacturers following TA Instrument are Mettler-Toledo and Netzsch, which respectively has 14.59% and 12.50% market share globally. The Dazhan is the leader of China differential thermal analysis. It sells a total of 0.71 million dollar differential thermal analysis products in the year of 2015.

Second, the global consumption of differential thermal analysis products rises up from 4354 units in 2011 to 4980 units in 2015, with an average annual growth rate of 3.36%. At the same time, the revenue of world differential thermal analysis sales market has a leap from 150.37 million dollar to 167.55 million dollar. The reason causes this increase is the growing demand for the differential thermal analysis products, which is the

outcome of the downstream industries are in a good situation.

Third, the downstream industries of differential thermal analysis products are pharmaceutical, food/biological and mineralogical research. In the recent years, with the recovery of global economic, the development of emerging countries and the global population growth, the consumption of differential thermal analysis made by population will be obvious. In the foreseeable future, the differential thermal analysis products will show an optimistic upward trend.

Over the next five years, LPI(LP Information) projects that Differential Thermal Analysis (DTA) will register a xx% CAGR in terms of revenue, reach US\$ xx million by 2023, from US\$ xx million in 2017.
