In this report, LP Information covers the present scenario (with the base year being 2017) and the growth prospects of global Digital Microscope market for 2018-2023.

A digital microscope is a variation of a traditional optical microscope that uses optics and a digital camera to output an image to a monitor, sometimes by means of software running on a computer. A digital microscope often has its own in-built LED light source, and differs from an optical microscope in that there is no provision to observe the sample directly through an eyepiece. Since the image is focussed on the digital circuit the entire system is designed for the monitor image. The optics for the human eye are omitted.

Digital Microscope industry has much fragmented, manufacturers are mostly in the Japan.
