In this report, LP Information covers the present scenario (with the base year being 2017) and the growth prospects of global Digital Single Lens Reflex Camera market for 2018-2023.

A digital single-lens reflex camera (also called a digital SLR or DSLR) is a digital camera combining the optics and the mechanisms of a single-lens reflex camera with a digital imaging sensor, as opposed to photographic film. The reflex design scheme is the primary difference between a DSLR and other digital cameras. In the reflex design, light travels through the lens, then to a mirror that alternates to send the image to either the viewfinder or the image sensor. The alternative would be to have a viewfinder with its own lens, hence the term "single lens

" for this design. By using only one lens, the viewfinder of a DSLR presents an image that will not perceptibly differ from what is captured by the camera's sensor.

The market of Digital Single Lens Reflex Camera has experienced a falling demand over the past years, and the trend is forecasted to continue in the following decade.

At present, there are eleven companies make up to 99.73 % production market share of the Digital Single Lens Reflex Camera market, and the world's large enterprises are mainly concentrated in Japan.
