In this report, LP Information covers the present scenario (with the base year being 2017) and the growth prospects of global Dolomite market for 2018-2023.

Dolomite is a naturally occurring double carbonate consisting of a structural arrangement of calcium carbonate CaCO_3 and magnesium carbonate MgCO_3 . The nodular particle shape of dolomite crystals has similarities to marble ones. Therefore, dolomite is often present together with marble. Its sedimentary origin had been subjected to high pressure and temperature (metamorphosis) during movements in the earth's crust.

Dolomite is an essential mineral which is using in many industries. The principal uses of industrial dolomite, firstly as a refractory and later as a flux, have been linked with iron and steelmaking since the latter part of the 19th century. In 2015, the industrial field is dominated the market with 67.13% share.

Despite the huge market of the industry, but the current dolomite downstream industry is saturated, so the market competition will continue to increase, resulting in significant reduction of profits for small manufacturers, leading to the possibility of changes in the market.

Over the next five years, LPI(LP Information) projects that Dolomite will register a xx% CAGR in terms of revenue, reach US\$ xx million by 2023, from US\$ xx million in 2017.
