In this report, LP Information covers the present scenario (with the base year being 2017) and the growth prospects of global Domestic Smoke Alarms market for 2018-2023.

Smoke Alarms are primarily used in domestic residential situations. They are different from the Smoke Detectors used in Fire Detection and Alarm Systems because they have a built-in alerting device, and are designed, tested, and manufactured to different standards. The most common examples are the battery-operated units available in many hardware stores.

Commercially-available domestic smoke alarms are usually either ionisation chamber or photoelectric (light scattering) types. Considerable debate has taken place in the media as to which technology gives better performance, especially considering the price difference between the two is minimal (historically, photoelectric was considerably more expensive and drained batteries much faster).

Over the next five years, LPI(LP Information) projects that Domestic Smoke Alarms will register a xx% CAGR in terms of revenue, reach US\$ xx million by 2023, from US\$ xx million in 2017.
