In this report, LP Information covers the present scenario (with the base year being 2017) and the growth prospects of global Drip Emitters market for 2018-2023.

The drip emitters are the devices that connect to the drip line or hose. They are the small pieces of equipment that disperse the water onto the plants.

Drip emitters are essentially small, plastic nozzles that can be punched through the wall of a main water line. The nozzle is small enough that it emits only a few drops of water at a time, watering your plants slowly. Drip emitters are sometimes connected to a timer to allow for constant, easy irrigation.

Drip emitters are common in large growrooms where plants are grown in containers. Each container will have a drip emitter (or two or three!) resting in the container where it supplies even amounts of irrigation to each plant.

Over the next five years, LPI(LP Information) projects that Drip Emitters will register a xx% CAGR in terms of revenue, reach US\$ xx million by 2023, from US\$ xx million in 2017.
