In this report, LP Information covers the present scenario (with the base year being 2017) and the growth prospects of global Drum Liners market for 2018-2023.

Drum liners are typically constructed from polyethylene, and are designed to fit in either steel or plastic drums of various sizes. Available in multiple widths, liners help minimize drum cleaning and replacement (reducing waste) and prevent product contamination. They are used for storing and shipping a variety of materials, such as liquid and raw products, and can hold from a few gallons to over 50 gallons. Drum liners are available in various types, including round bottom, flat bottom, rigid and semi-rigid variations. These liners are often custom manufactured in various designs, with some featuring an anti-static composition.

Geographically, North America is the largest region accounting for 34.1% of the global drum liner market in 2017 and is estimated to decline and reach 32.97% of the global market by the end of 2022. Asia-Pacific is expected to hold about 21.78% of the global drum liner market share in 2017 and is expected to reach 24.1% by the end of 2022. Over the next five years, LPI(LP Information) projects that Drum Liners will register a 4.5% CAGR in terms of revenue, reach US\$ 170 million by 2023, from US\$ 130 million in 2017.
