In this report, LP Information studies the present scenario (with the base year being 2017) and the growth prospects of global DSL Network Equipment market for 2018-2023.

DSL is a digital subscriber line, which is a combination of transmission technologies using a telephone line as a transmission medium. DSL technology supports symmetric and asymmetric transmission modes on subscriber loops that convey public telephone networks, solving the "last mile" transmission bottleneck that often occurs between network service providers and end users. Since the DSL access plan eliminates the need to reconstruct telephone lines, it can make full use of the telephone subscriber loops that can already be extensively deployed, greatly reducing the additional overhead. Therefore, the use of copper telephone lines to provide higher-speed Internet access is more popular among users and has attracted attention in various fields. It has been used in a large number of countries and regions.

The DSL network equipment market is expected to grow significantly over the following year owing to the increase in the number of internet users globally. Moreover, as the internet service providers are growing rapidly in terms of subscriptions, the demand for network equipment is anticipated to grow in the near future. The telecommunications, networks, and data center IT industries, DSL equipment sales tumbled in 2017, falling to \$2.5 B as operators look to alternative deployments. DSL market experienced double-digit decline as Gfast looms over the horizon. Asia Pacific is expected to dominate the market due to increasing demand for DSL network equipment, especially in Philippines, Vietnam and India. The DSL market decelerated in the second half of 2017, Gfast Amendment 3 chipsets have recently become available, and operators are furiously

testing and trialing the products. Some operators are hesitant to deploy VDSL and are delaying investments to wait for Gfast or PON. However, Gfast commercial availability is limited and not expected to ramp until 2019.

Over the next five years, LPI(LP Information) projects that DSL Network Equipment will register a xx% CAGR in terms of revenue, reach US\$ xx million by 2023, from US\$ xx million in 2017.
