Abstracts

The report requires updating with new data and is sent in 48 hours after order is placed.

In this report, LP Information covers the present scenario (with the base year being 2017) and the growth prospects of global Duplicator market for 2018-2023.

A duplicator is similar to a copier in its basic function: it creates a copy of a document. The catch is that it copies one page at a time and usually in a single color. The output and technology of a duplicator are different than a copier in a few respects. Duplicators don't use toner and ink; instead, a duplicator creates a stencil and uses thermal imaging to press copies onto pages.

Demand is driven by demographics and the health of the economy. The profitability of individual companies depends on their ability to bid accurately, secure contracts, and control costs. Large companies enjoy economies of scale in financing and the ability to offer a broad range of services in many locations. Smaller companies can compete effectively by specializing in particular services or focusing on certain geography.

Despite fierce competition, due to the global recovery trend, investors are still optimistic about this area; more new investment will enter the field in the future.

China domestic Duplicator industry developed fast, though Chinese companies have low price advantage, the quality of domestic products is relatively poor.

Over the next five years, LPI(LP Information) projects that Duplicator will register a xx% CAGR in terms of revenue, reach US\$ xx million by 2023, from US\$ xx million in 2017.
