## Abstracts

The report requires updating with new data and is sent in 48 hours after order is placed.

In this report, LP Information studies the present scenario (with the base year being 2017) and the growth prospects of global E-commerce Payment market for 2018-2023. E-commerce Payment is a transaction of buying or selling online. Electronic commerce payment draws on technologies such as mobile commerce, electronic funds transfer, Internet marketing, online transaction processing, electronic data interchange (EDI) and automated data collection systems. It has become increasingly popular due to the widespread use of the internet-based shopping and banking. Payment method security technology, payment customer experience are fast updating all the time. These are also the key features market players engaging to lead the run from all over the whole. However, this trend is not expected to continue in 2016, as a growth rate of 17.5% is forecast, which would result in a global E-commerce turnover of \$2,671bn. Even though this growth rate is still significant, its decrease can be seen as a first sign of the global E-commerce market becoming more mature.

In comparison with last year, China's ecommerce market grew significantly faster than the one of the US. Compared to 2016, Chinese ecommerce sales grew by 27.2%, while in the US it grew by 8.99 %. For 2017 as well, the Chinese E-commerce market is expected to increase much faster than the American one (24% vs. 9%). As a result, it will continue to increase its lead even further.

Over the next five years, LPI(LP Information) projects that E-commerce Payment will register a 10.8% CAGR in terms of revenue, reach US\$ 1455200 million by 2023, from US\$ 786500 million in 2017.
