In this report, LP Information covers the present scenario (with the base year being 2017) and the growth prospects of global E-waste Disposal market for 2018-2023.

E-waste Disposal industry refers to the work or business contains the collecting, transporting, re-using or processing of e-waste.

As the electronics industry is developing rapidly worldwide, the volume of electronic equipment generated is increasing in amazing speed, as well as the e-waste. These e-wastes contain lot of valuable materials or equipment that can be recycled. And e-waste also contains toxic and hazardous materials including mercury, lead, cadmium, beryllium, chromium, and chemical flame retardants, which have the potential to leach into our soil and water.

Currently, the volume of e-waste that can be recycled properly is less than 20% of the total volume of e-waste generated worldwide each year. There is still quite a lot of work should be done to promote the development of e-waste recycling industry.

Growing numbers of governments are beginning to make laws or taking more strict measures to restrict the incineration or fill of e-waste and try to ban undocumented workshops of e-waste recycling.

Over the next five years, LPI(LP Information) projects that E-waste Disposal will register a xx% CAGR in terms of revenue, reach US\$ xx million by 2023, from US\$ xx million in 2017.
