## Abstracts

The report requires updating with new data and is sent in 48 hours after order is placed.

In this report, LP Information covers the present scenario (with the base year being 2017) and the growth prospects of global Electric Power Distribution Equipment market for 2018-2023.

Electric power distribution system is the final stage in the delivery of electric power; it carries electricity from the transmission system to individual consumers. Distribution substations connect to the transmission system and lower the transmission voltage to medium voltage ranging between 2 kV and 35 kV with the use of transformers.

In this report, we study the electric power distribution equipment; mainly cover the transformers, switchgears and other equipment, like breaker etc.

First, for industry structure analysis, the electric power distribution equipment industry is fragmented. A variety of manufacturers ranging from large multinational corporations to small privately owned companies compete in this industry. The top ten producers account for about 37.84% of the revenue market.

Second, China occupied 28.61% of the production value market in 2015. It is followed by Europe and North America, which respectively have around 26.90% and 21.43% of the global total industry. Other countries have a small amount of production value.

Third, for forecast, the global electric power distribution equipment revenue would keep increasing with annual growth rate with 3~5%, and a little higher speed in China.

Although electricity transmission and distribution industry have a lot of opportunities, for the new entrants with only advantage in capital without sufficient support in technology and downstream channels, the research group did not recommend entering this market.

Over the next five years, LPI(LP Information) projects that Electric Power Distribution Equipment will register a xx% CAGR in terms of revenue, reach US\$ xx million by 2023, from US\$ xx million in 2017.
