Electrical Submersible Pumps (ESP) are one of the most reliable and efficient ways to lift fluids to the surface, both oil and water. As the name suggests, it is submerged into the reservoir fluids and pushes the fluid to the surface. The ESP pumps can be designed to handle fluids of up to 60,000 b/d and cover various well conditions and production profiles, and generally a low cost solution for high volumes of lifting.

Submersible pump to fundamentally eliminate the phenomenon of air resistance, the use of positive pressure push the principle of a fundamental solution to the high-temperature environment, high-lift, long-range conditions, pipeline pump, volumetric pumps, vane pumps and other negative work principle of the electric pump cannot solve the problem (such as less oil, not even the drawbacks of oil).

North America and China, is the main production base of Electric Submersible Pump, key manufacturers: Schlumberger, Borets, General Electric, Baker Hughes, etc. The Sales of Electric Submersible Pump was 22962 units in 2015, of which 47.83% is produced in USA and Russia.

Russia, USA and China are the major sales markets, with global market share of 25.2%, 21.19% and 13.67% in 2015. But the market share of these regions is gradually declined, and the market in other areas is expanding year by year.
