In this report, LP Information covers the present scenario (with the base year being 2017) and the growth prospects of global Electric Vehicle Drive Motors market for 2018-2023.

In this report, the new energy vehicle primarily includes the plug-in hybrid electric vehicle (PHEV), battery electric vehicle (BEV), fuel cell vehicle and so on.

Electric Vehicle Drive Motors is a new kind motor, it is more like one kind motor that it collects the function of electric motor and generator, it can provide power from the battery and it can also recycle the power from vehicle putting on the brake, it more meets the idea of the new energy vehicles and societal need.

As we all know that the battery is the most important section of the new energy vehicle, and currently, the battery exist the problem of the storage capacity but it occupies a large part of the costs and space of the new energy vehicles, so the Electric Vehicle Drive Motors needs higher technology to improve the efficiency and decrease the volume to satisfy the new energy vehicle's demand.

The Specifications include the material, rotating speed, current manner, power and so on, the main components are stator and rotor, these two components control the quality of the drive motor, it is the work efficiency. Because the new energy vehicle needs the battery to provide power, the power and the magnetic field may influent each other, so the Specifications needs higher.

The global production of Electric Vehicles Motor is about 1.4 million Unit, the biggest production regions is in China, and China is the largest production growth rate region; the largest product type is PMSM, the biggest company is FUKUTA, the other type are electric vehicle motor is Asynchronous Motor, these two type have high production growth rate.

The largest consumption region is also the China, and China has largest consumption growth rate, the Europe and USA has relative smaller consumption region, because their governments support intensity cannot meet their demand.

From the initial, the electric vehicle motor is relative mature than other part in electric motor, the price is very high than the similar performance, the average price depends on the product type structure.

Over the next five years, LPI(LP Information) projects that Electric Vehicle Drive Motors will register a xx% CAGR in terms of revenue, reach US\$ xx million by 2023, from US\$ xx million in 2017.
