The report requires updating with new data and is sent in 48 hours after order is placed.

In this report, LP Information covers the present scenario (with the base year being 2017) and the growth prospects of global Electrodialysis Equipment market for 2018-2023.

Electrodialysis (ED) is used in seawater desalination to produce salt, food, pharmaceutical, laboratory and recycling environments and others fields. ED is a Laboratory membrane separation process in which ions are transported through ion-permeable membranes, from one stream to another, under the influence of a voltage potential gradient. Two types of membranes are used: cationic-exchange membranes only allow cations to transport, and anion-exchange membranes only allow anions through. These membranes are impermeable to liquids. A large number of alternating cation and anion-exchange membranes are assembled to form diluate and concentrate compartments in what is known as an electrodialysis stack.

Electrodialysis (ED) is used to transport salt ions from one solution through ion-exchange membranes to another solution under the influence of an applied electric potential difference. This is done in a configuration called an electrodialysis cell. The cell consists of a feed (dilute) compartment and a concentrate (brine) compartment formed by an anion exchange membrane and a cation exchange membrane placed between two electrodes. In almost all practical electrodialysis processes, multiple electrodialysis cells are arranged into a configuration called an electrodialysis with alternating anion and cation exchange membranes forming the multiple electrodialysis cells.

In the coming years there is an increasing demand for Electrodialysis Equipment in the regions of North America, Europe and Asia-Pacific, the other regions also have huge demand on it for the environment protection etc.

In the future, the production and consumption is estimated to continue developing with a

stable growth rate to meet the large and increasing demand, more and more manufacturers will go into this industry.

The price of Electrodialysis Equipment differs from company to company, as there is a great difference among the Electrodialysis Equipment technology from different companies.

Over the next five years, LPI(LP Information) projects that Electrodialysis Equipment will register a 4.6% CAGR in terms of revenue, reach US\$ 390 million by 2023, from US\$ 300 million in 2017.
