## Abstracts

The report requires updating with new data and is sent in 48 hours after order is placed.

In this report, LP Information covers the present scenario (with the base year being 2017) and the growth prospects of global Electronic Cigarette Lithium Battery market for 2018-2023.

Electronic Cigarette Lithium Batteries are batteries equipped in E-cigarettes as power sources, that heat up the resistance wire in addition to vaporize the E-liquid. Battery is the biggest component of an E-cigarette, which is frequently a rechargeable lithium battery.

This report will study the market size and trends of built-in lithium battery cells and replaceable cells that are applied in three major types of E-cigarettes: cigalikes, egos and mods.

As of 2015, around 867 million lithium batteries for electronic cigarettes have been sold to the e-smokers in e-cigarettes or replaceable batteries, comparing to 592 million units for 2014. The consumption of batteries is proportional to e-cig consumption as once an e-cig is sold, at least one battery will be attached or purchased, for the Mod users, “playing” batteries will create bonus consumption.

2015 indicated a production growth rate of 46.43% faster than 32.85% from the last year. This rapid growth can be attributed to the availability of more Mods e-cig devices and their growing popularity all over the world which has boosted the lithium battery industry, especially the replaceable ones.

The global production of e-cigarette lithium batteries is expected to reach 5.3 billion units in 2021 along with the increasing trend of e-cigarette market. In terms of revenue, the market is valued at 16.8 USD.

Over the next five years, LPI(LP Information) projects that Electronic Cigarette Lithium Battery will register a xx% CAGR in terms of revenue, reach US\$ xx million by 2023, from US\$ xx million in 2017.
